PRESS RELEASE For immediate release · Berezan, Kyiv region, Ukraine · 27 October 2026

Ukraine's first float glass plant opens its industrial park to European manufacturers

City of Glass, a registered industrial park built around the 600 t/day Berezan float glass plant, is inviting coating, fiberglass, GRP-pipe, cullet, logistics and energy companies to take plots next to the line. Teasers are available instantly at cityofglassukraine.com.

Berezan, Ukraine — City One Development today opened the City of Glass industrial park to outside participants. The park surrounds the Berezan float glass plant, the first float line in Ukraine, designed by CTIEC (China Triumph International Engineering) for 600 tonnes of glass a day, or 18.6 million m² a year. First glass is scheduled for December 2028, with full output from April 2029.

Ukraine today imports all of its float glass and all of its coated glass. The park is designed so that the industries that use float glass can set up next to the source instead of hauling it across borders.

Six businesses the park is looking for

- A magnetron coating line for low-E and solar-control glass (Ukraine's coated-glass market is about 7 million m² a year, fully imported)
- A fiberglass plant for rovings and composite products
- A GRP pipe plant for water and sewerage networks
- A cullet management operator
- A glass transport company for Ukrainian deliveries and runs to Poland and Romania
- An energy company for cogeneration and solar supply inside the park

What is already in place

- 38.3 ha of land secured; the park is registered under Ukraine's industrial parks law, which gives participants a ten-year corporate income tax exemption and land lease without auction
- 10 MW grid connection built and connected; gas network looping to 10,000 m³/h planned for 2027 with state support; on-site borehole
- Environmental impact conclusion and construction permit received; design and priority refractories contracted with CTIEC
- 50 km from Kyiv, a railway station in Berezan, road links to the Polish and Romanian borders
- The coating and fiberglass projects are shortlisted under Pillar II of the EU's Ukraine Investment Framework

"The float plant gives the park what new plants usually have to build themselves: raw material over the fence, a daily freight flow, power and gas on site," said Oleksandr Lakei, who leads the project at City One Development. "We are looking for European partners who want to be the first in Ukraine in their niche, with the plant as their neighbour and customer."

Interested companies can download a one-page teaser for each of the six businesses at cityofglassukraine.com; the site is available in English, Ukrainian, German, Polish and Norwegian. City One Development replies to every request within two working days.

About City of Glass City of Glass is an industrial park in Berezan, Kyiv region, developed by City One Development around the Berezan float glass plant. More at cityofglassukraine.com.
